Mary Perkins, Shelter NSW, (02) 9267 5733 ext. 14, www.shelternsw.org.au

Adrian Pisarski, National Shelter, (07) 3393 2433, www.shelter.org.au

Housing stress

As at 2007, there were over 1,100,000 Australian families in housing stress, i.e. they paid more than 30% of their income on recurrent housing costs.¹ Those families in housing stress comprised 10% of Australian families.²

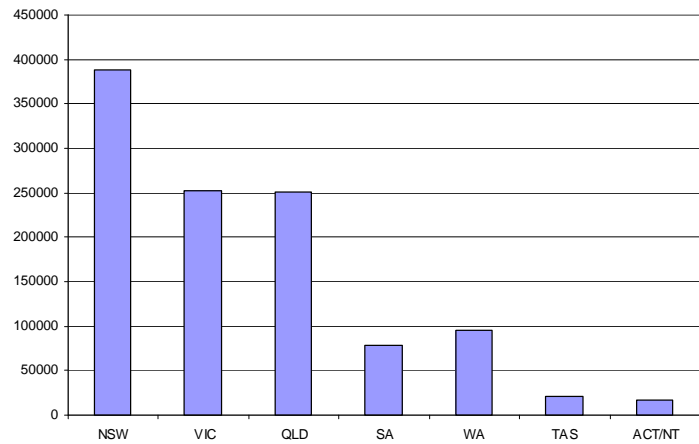

Housing stress varies by tenure:

- renters in the private rental market comprised over half of the families in housing stress in Australia in 2007;³
- 47.5% of low-income households in the private rental market in Australia were in rental stress in 2007–08;⁴
- 46.6% of low-income households with a mortgage were in mortgage stress across Australia in 2007–08.⁵

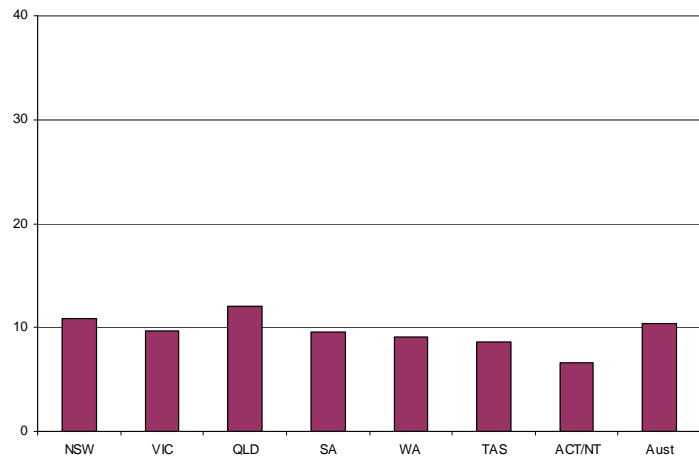

Nationally, in 2007–08, those paying more than 30% of their gross income in housing costs included:

- 445,000 private renters with incomes in the lowest 40% of the income distribution;
- 117,000 private renters who were wholly depending on government income support;
- 312,000 mortgagees with incomes in the lowest 40% of the income distribution; and
- 27,000 mortgagees who were wholly depending on government income support.⁶

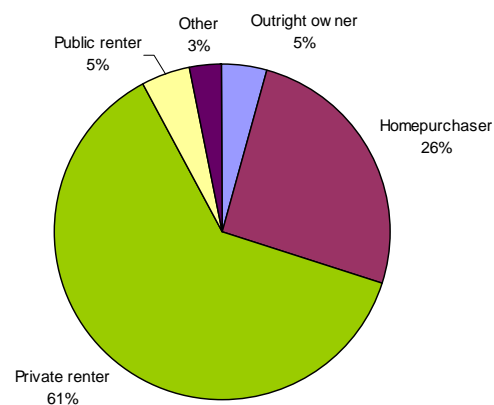

Number of Australian families in housing stress, by state

Percentage of families in housing stress, in each state

Tenure profile of families in housing stress

Home purchase

House prices across Australia have more than quadrupled in the last 20 years.⁷

Between 1986 and 2007, house prices increased fivefold whereas average earnings doubled in that period.⁸

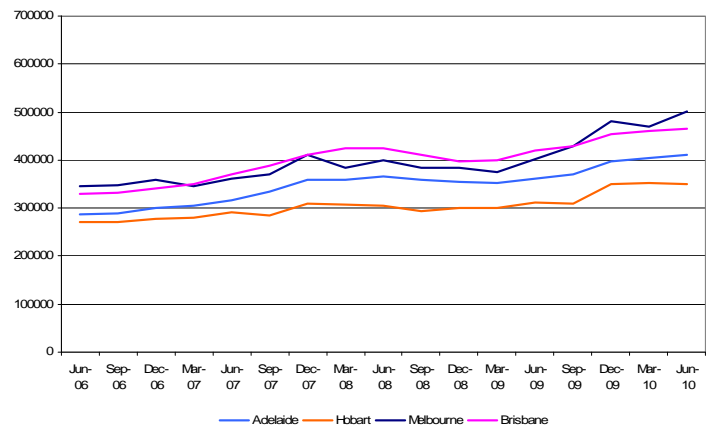

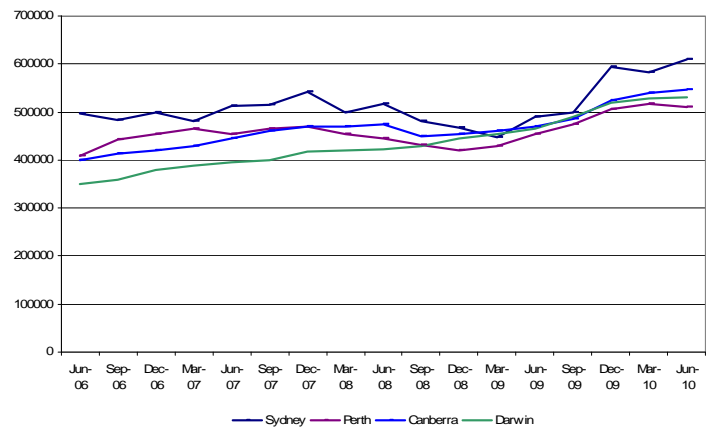

Australia is the only developed country where this ‘housing bubble’ trend persisted during and after the peak of the global financial crisis (in 2008–09).⁹

Sydney has the most heated market for private housing amongst capital cities in Australia, retaining its position between the March and June quarters 2010. The median house price in Sydney in the June 2010 quarter was \$610,000. After Sydney, the most expensive capital cities are Canberra, Darwin and Perth.

Median prices for non-strata houses increased in all capital cities between the March and June quarters 2010, other than in Perth and Hobart (where they declined).¹⁰

In 2008–09, only 3.0% of homes sold nationally were affordable for low-income households, and 27.5% were affordable for moderate-income households.¹¹

Median price of non-strata houses, capital cities

Home purchase

High house prices present two barriers to homeownership for low-income households:

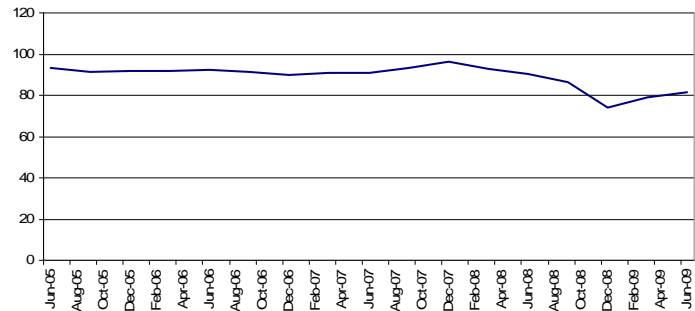

- an initial (or ‘market entry’) barrier when seeking to meet the upfront costs of buying a dwelling; and
- an ongoing issue with meeting recurrent costs.

The deposit required for a first home loan for a median-priced dwelling was an amount equivalent to 81.3% of the average household disposable income as at June 2009.¹²

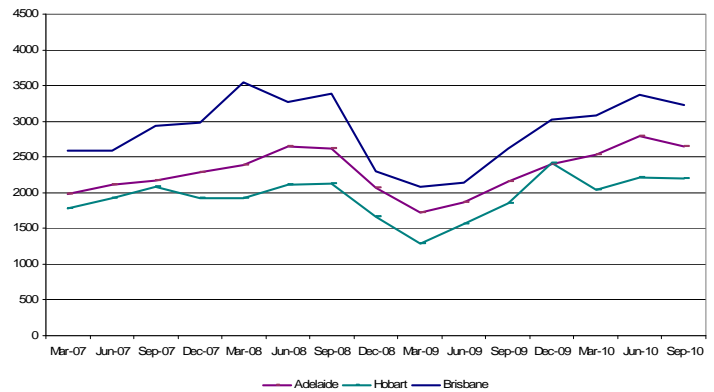

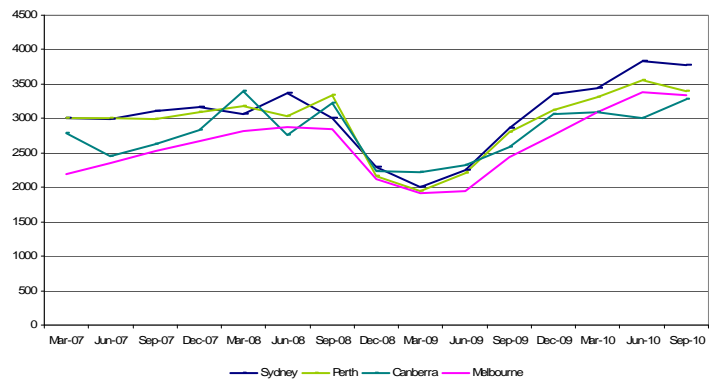

Monthly loan repayments for dwellings bought at a median price with the help of a loan from the Commonwealth Bank in September 2010 varied from \$2,194 in Hobart to \$3,769 in Sydney. Monthly mortgage repayments decreased in all capital cities between the June and September quarters 2010, except in Canberra.¹³

There is a direct relation between age and tenure, with households headed by a younger person much more likely to be in rental housing than households headed by an older person. For example, in 2007–08, 83.1% of households headed by a person aged 15–24 were in rental housing, and 84.3% of households headed by a person aged 65–74 were in owner-occupied housing.¹⁴

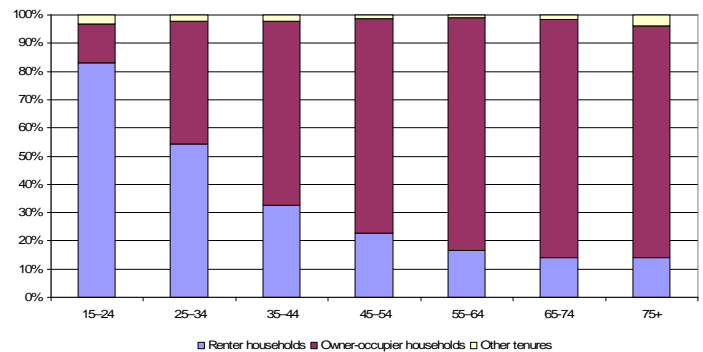

First homebuyer deposit gap as % of average household disposable income, Reserve Bank of Australia

Monthly loan repayments for median-priced dwellings

Age of householder and housing tenure

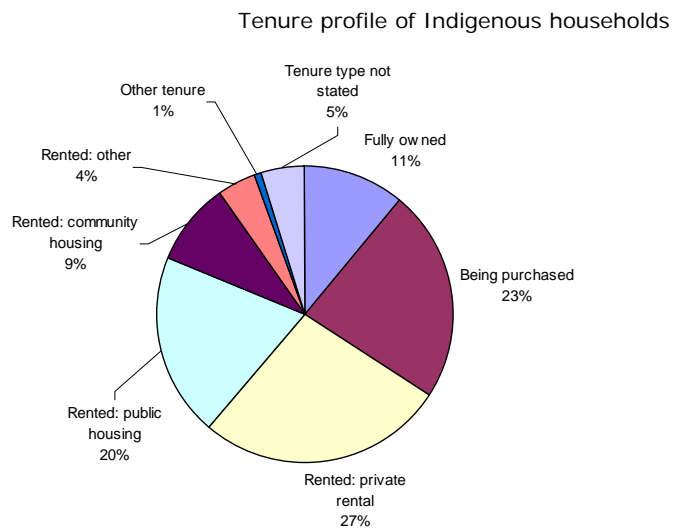

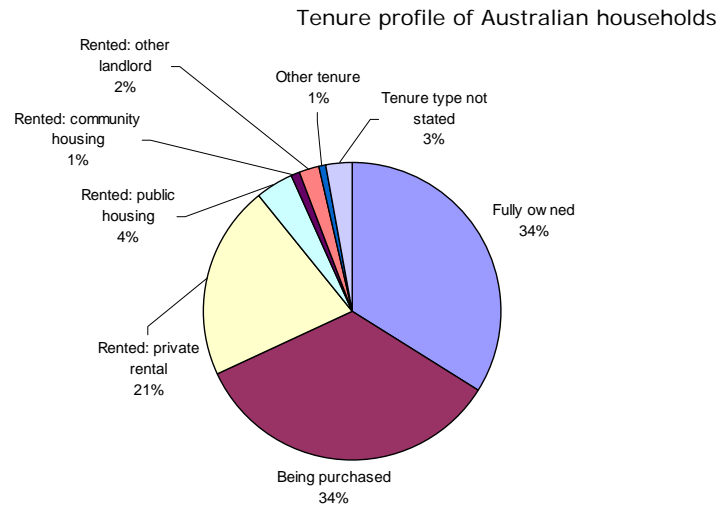

Home purchase

As at 2007–08, the home ownership rate in Australia was 67.4%.¹⁵

The tenure profile of households with an Indigenous person differed from the Australian total in 2006. They were:

- less likely to be homeowners (34%, compared to 68% of Australian households generally);
- more likely to be in private rental (27%, compared to 21% of Australian households generally);
- more likely to be in public housing (20%, compared to 4% of Australian households generally); and
- more likely to be in community housing (9%, compared to 1% of Australian households generally).¹⁶

Private rental

The supply of private rental housing is dependent on many factors. These include the relative attraction of investment in housing compared to the returns on investment in other areas, which is influenced by the taxation treatment of each.

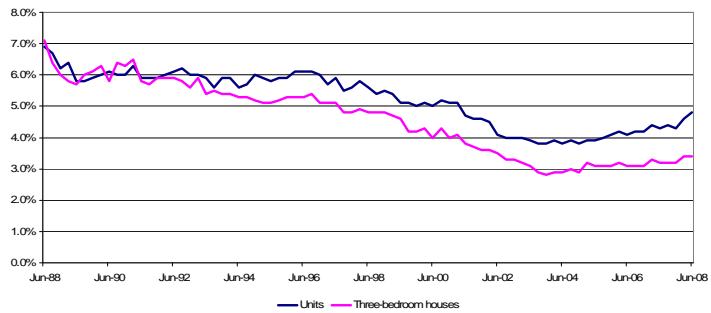

Short-term income from rents has not been a significant driver of investment in this sector.

Gross yields from investment in rental dwellings (rental income as a proportion of dwelling value) averaged 4.8% for units and 3.4% for three-bedroom houses in Australia, in June 2008.¹⁷ The lower the gross rental yield is, the more overvalued the property is.

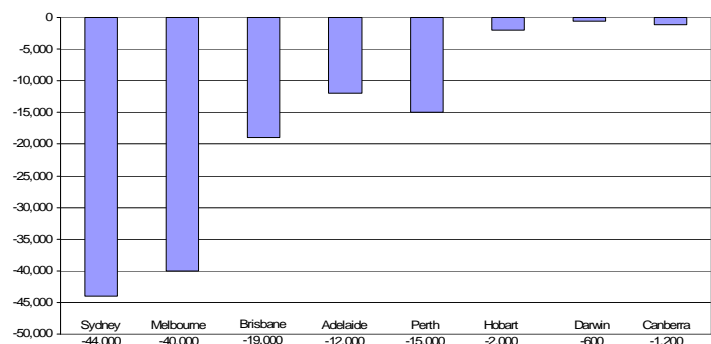

There is a shortage of affordable and available dwellings for rental in the private market for households with low-moderate incomes (the bottom two income quintiles). The shortage of affordable dwellings is intensified by higher-income households renting some of the affordable dwellings, so that they are not available for lower-income households.

In 2007–08, there was a shortage of 493,000 private rental dwellings that were both affordable and available for those in the bottom 40% of the income distribution – with 311,000 being located in capital cities.¹⁸

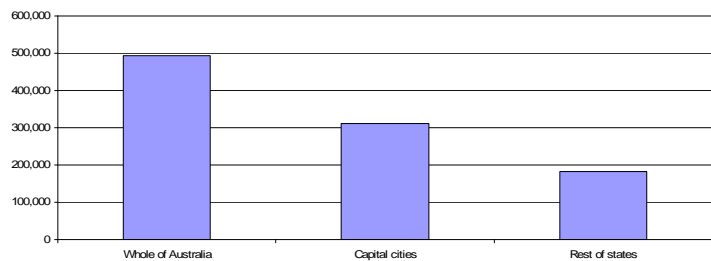

Rental yields on residential properties

Affordable and available private rental stock for very low income households

Shortage of rental dwellings which were affordable to lower-income households and available to those households

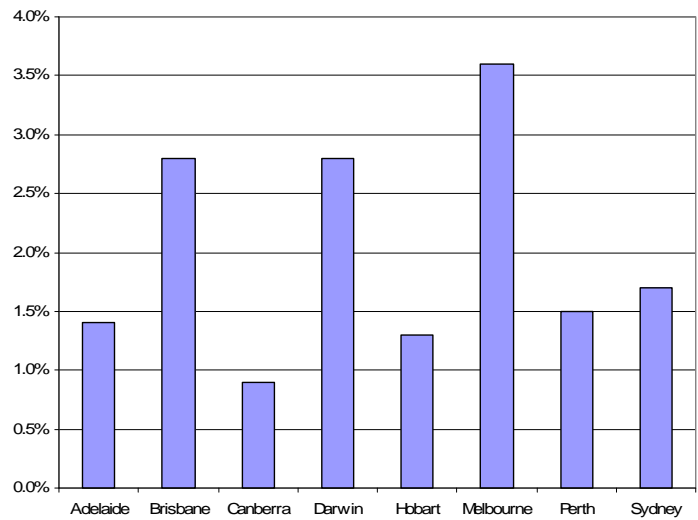

Private rental

Vacancy rates for dwellings in the private housing market in capital cities are low, ranging from 0.9% in Canberra to 3.6% in Melbourne in December 2010.¹⁹

The median weekly rent for private rental was \$250 for Australia in 2007–08, and it varied from state to territory. The highest median weekly rent in 2007–08 was in the ACT at \$320, and the lowest median weekly rent was in Tasmania at \$180.²⁰

Vacancy rates for private rental housing, December 2010

Median weekly rents

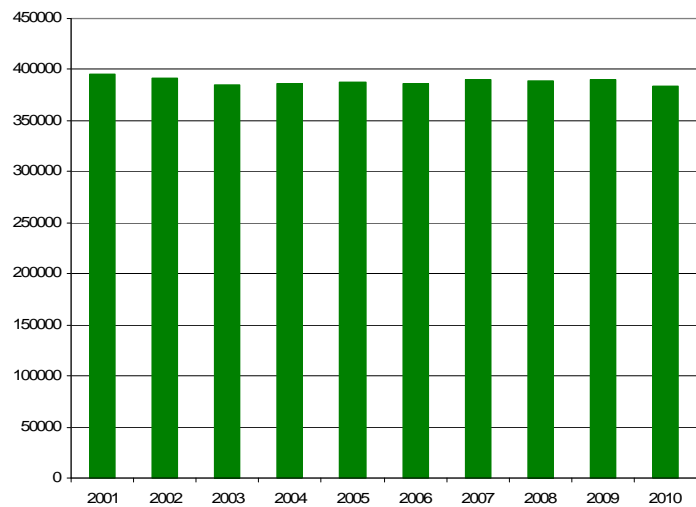

Social housing

In 2010, there were 383,316 social housing dwellings in Australia.²¹ This figure covers public housing, community housing, and government-owned and managed Indigenous housing.²²

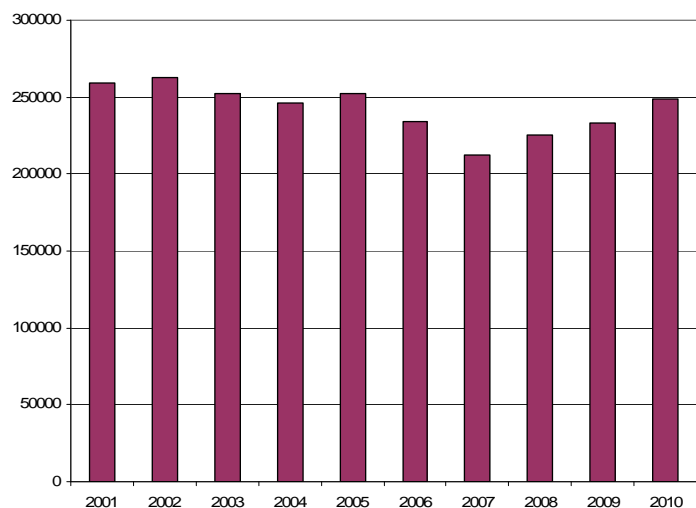

The number of people on the social housing waiting lists has fallen by 4.1% between 2001 and 2010. The major reasons for the reduction have been the tightening of eligibility criteria in some jurisdictions, and reviews of the status of previous applicants. Even so, there were 248,419 applicants waiting for social housing in 2010.²³

Social housing is an important source of housing to people with disabilities. In 2008, 30.5% of all households in public rental housing, state owned and managed Indigenous housing and community housing contained a household member with a disability – compared to the national estimate of 20% of the total population.²⁴

Social housing dwellings

Social housing waiting lists

Social housing

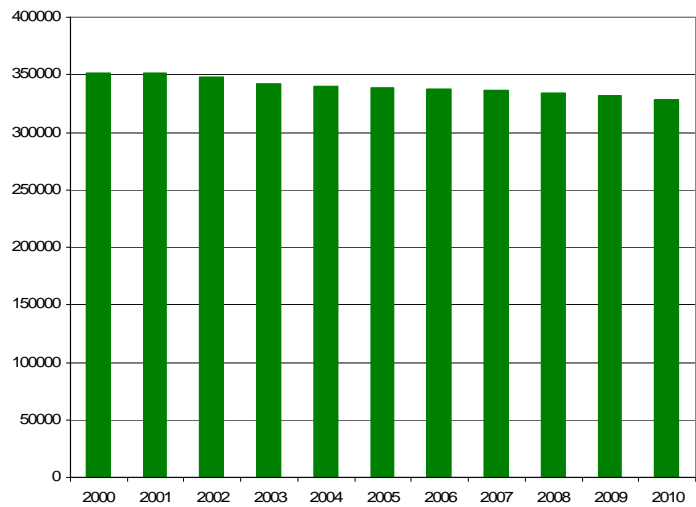

Public housing is the biggest subsector of social housing, providing 85.7% of social housing dwellings. In 2010, there were 328,676 public housing dwellings nationally.

There has been a 6.6% decrease in supply in this subsector between 2000 and 2010.²⁵

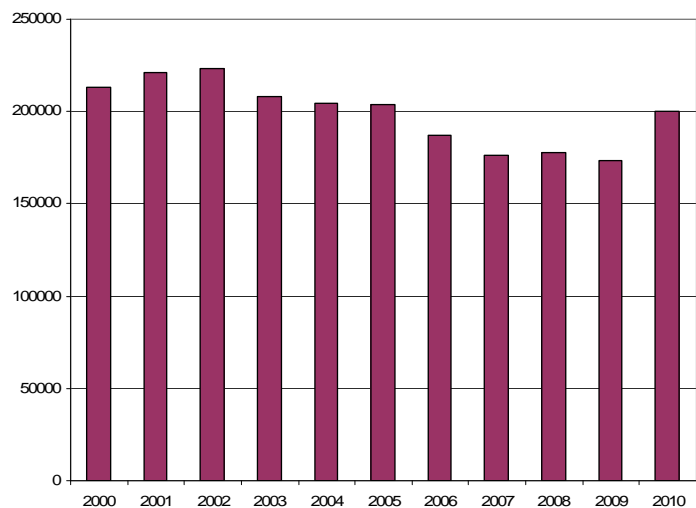

There were 200,095 applicants on the public housing waiting lists across Australia in 2010.²⁶

There has been an 6.1% decrease in the number of applicants on the waiting lists for this subsector between 2000 and 2010. Again, the major reasons for the reduction have been the tightening of eligibility criteria in some jurisdictions, and reviews of the status of previous applicants.

Public housing dwellings

Public housing waiting lists

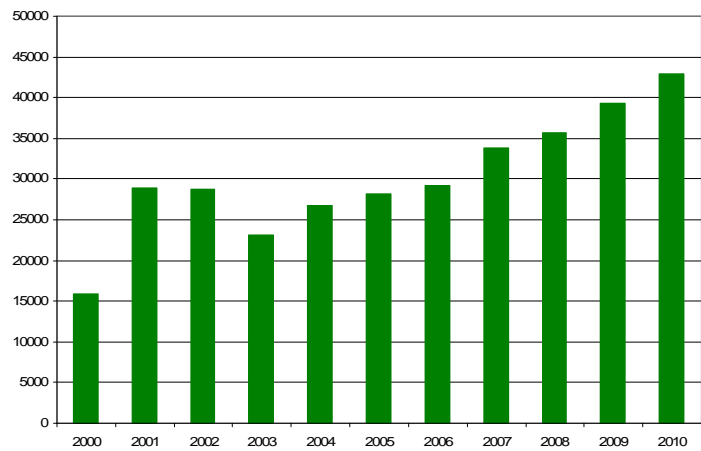

Social housing

The community housing subsector had 42,942 dwellings in 2010.²⁷

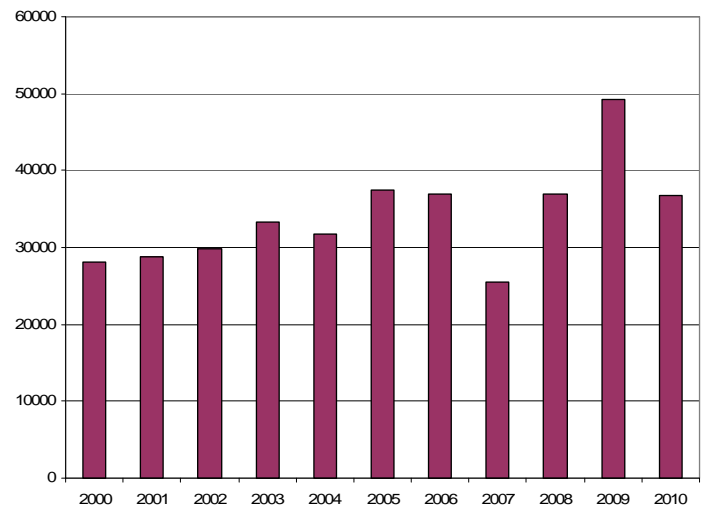

There has been a 169.8% increase in supply in this subsector between 2000 and 2010.

There were 36,689 applicants on the community housing waiting lists in 2010.²⁸

Community housing dwellings

Community housing waiting lists

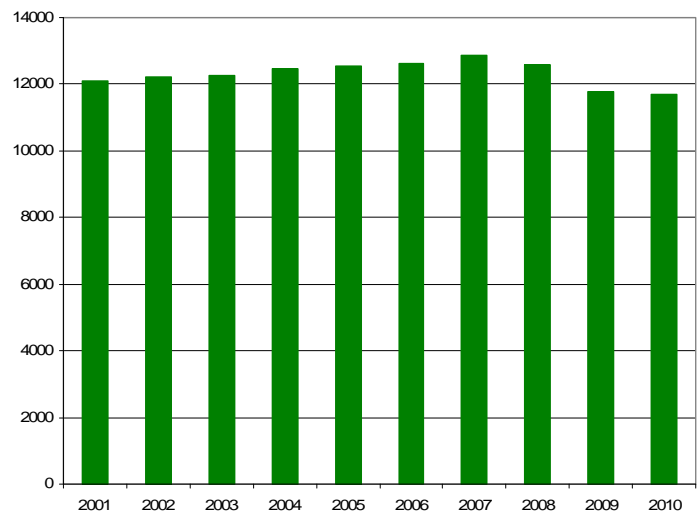

Social housing

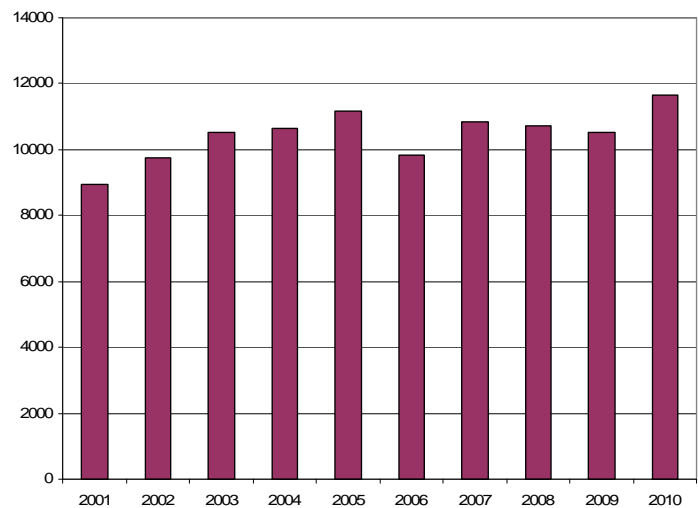

The government-owned and managed Indigenous housing subsector had 11,698 dwellings in 2010.²⁹

There were 11,653 applicants on the waiting lists for government-owned and managed Indigenous housing in 2010.³⁰

Indigenous housing dwellings

Indigenous housing waiting lists

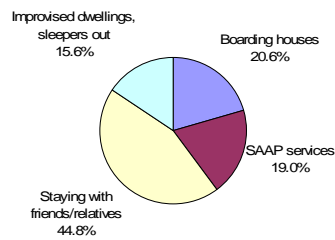

Homelessness

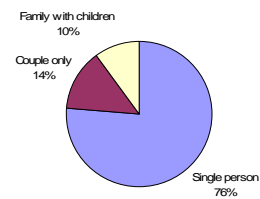

On census night in 2006:

- there were 105,000 homeless people in Australia;³¹
- 19,849 of the homeless population were staying in Supported Accommodation Assistance Program (SAAP) services (now known as homelessness services);³²
- 76% of the homeless population was comprised of single people;³³
- 16,375 of the homeless population were classified as rough sleepers – 4,327 were located in capital cities, 1,985 were located in regional centres and 10,063 were located in rural and remote communities.³⁴

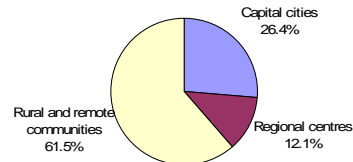

Homeless people by dwelling type

Homeless people by household type

Location of rough sleepers by region

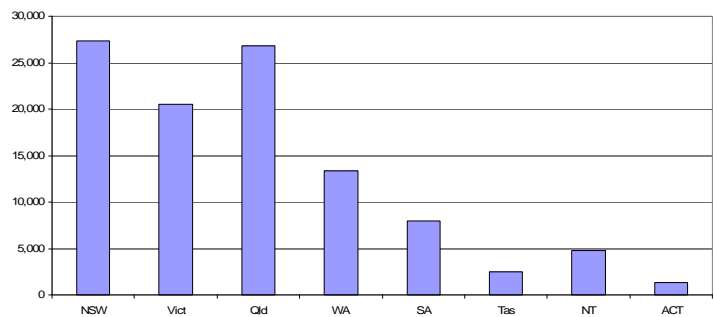

Homelessness

The rate of homelessness in Australia has remained constant between census nights in 2001 and 2006, at 53 homeless people per 10,000 of the population.

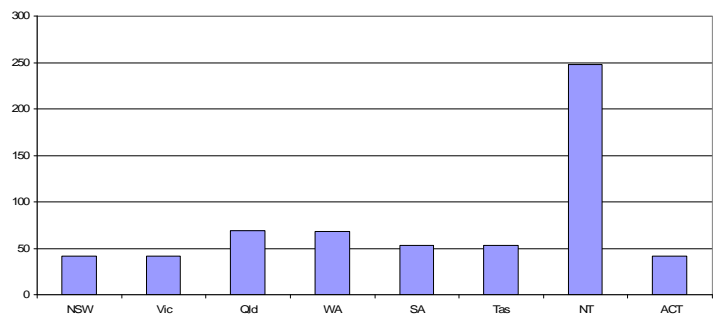

- New South Wales has the largest number of homeless people in Australia at 27,374 (26.1%), and the ACT has the smallest number, at 1,364 (1.3%).³⁵
- The Northern Territory has the highest rate of homelessness in Australia at 248 homeless people per 10,000 of the population, and the ACT, New South Wales and Victoria have the lowest rate, at 42 homeless people per 10,000 of the population.³⁶

In 2006, 9.1% of the national homeless population were identified as Aboriginal, whereas only 2.4% of the population were identified as Aboriginal.³⁷

Number of homeless people by state and territory

Rate of homelessness per 10,000 of the population, by state and territory

Homelessness

The number of closed support periods in the form of accommodation provided to homeless people by homelessness agencies was 55,200 in 2008–09.³⁸

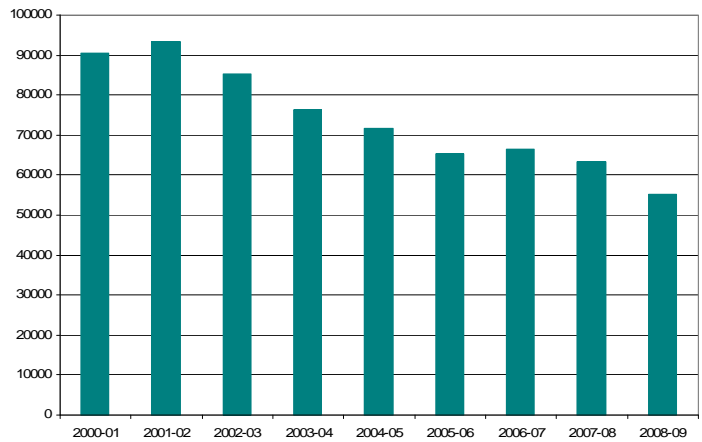

Indigenous peoples are heavily ‘over-represented’ as clients of homelessness services. Out of 118,900 clients accessing homelessness agencies in 2008–09, 21,400 were Indigenous.³⁹

The most common reasons given for seeking assistance from homelessness agencies in 2008–09 were:

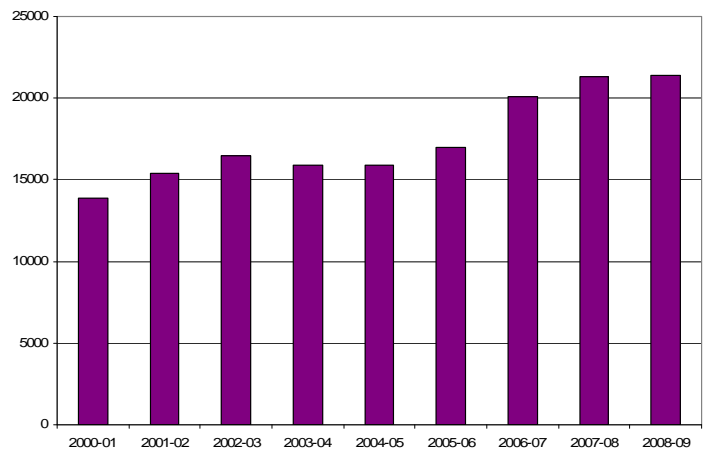

- domestic or family violence (22.0% of support periods);
- relationship or family breakdown (10.4%); and
- other financial difficulty (7.6%).⁴⁰

The average daily number of requests for immediate accommodation that could not be met by homelessness agencies was 220.1 in 2008–09.⁴¹

Notes

- ¹ Ryanti Miranti and Binod Nepal, 'Housing stress in Australia 2007', National Centre for Social and Economic Modelling, University of Canberra, 2008. NATSEM defines a family as an individual or group of individuals in a household who share their income; this definition does not include shared households, where individuals do not share their income. NATSEM defines housing stress as the situation where a family's housing costs are more than 30% of its *disposable* income and the family is in the bottom two quintiles of the equivalised income distribution. This definition is referred to as the '30/40 rule'. For information about equivalised income, go to: Australian Bureau of Statistics, 'Government benefits, taxes and household income, Australia, 2003–04' (6537.0), 2007, Appendix 2. The '30/40 rule' defined in 'Housing affordability in Australia' refers to a 30% housing cost ratio to determine potential affordability problems and defines lower-income households as those in the lowest two quintiles of the equivalent disposable income distribution, but it assesses housing costs in relation to *gross* household income (Judith Yates and Michelle Gabrielle, 'Housing affordability in Australia', Australian Housing and Urban Research Institute, Research Paper 3, 2006, p.14).

- ²⁵ Australian Institute of Health and Welfare, 'Public rental housing', Housing assistance data development series. The number indicates the number of tenantable dwellings as at 30 June each financial year.
- ²⁶ Australian Institute of Health and Welfare, 'Public rental housing'.
- ²⁷ Community housing here refers to social housing provided through Commonwealth–state–territory multilateral funding agreements by non-Indigenous organisations. It does not include affordable rental housing provided by community organisations with finance from other sources; it specifically does not include submarket rental housing provided under disability and aged care programs.
- ²⁸ Australian Institute of Health and Welfare, 'Community housing', Housing assistance data development series. The data does not include the Northern Territory. The data for 2002 and 2003 does not include Victoria (not available). Data was not available for all community housing providers in New South Wales as at 30 June 2010, due to the development of systems to capture waiting list information relating to a common application process for public and community housing.
- ²⁹ Government-owned and managed Indigenous housing does not comprise the entire Indigenous social housing sector: it refers to that part financed through the Commonwealth–State–territory multilateral funding agreements on housing and does not include social housing provided by Indigenous organisations (e.g. land councils) with finance from other sources.
- ³⁰ Australian Institute of Health and Welfare, 'State owned and managed Indigenous housing', Housing assistance data development series. The data do not include the Northern Territory or the Australian Capital Territory (not applicable).
- ³¹ Chris Chamberlain and David MacKenzie, *Counting the homeless 2006: Australia*, Australian Bureau of Statistics, Australian Census Analytic Program, cat. no. 2050.0, 4 September 2008, p. x. The report uses a cultural definition of homelessness, which is comprised of: primary homelessness (people without conventional accommodation, such as people sleeping in parks and using cars for temporary shelter); secondary homelessness (people who move frequently from one form of shelter to another, such as those in emergency or transitional accommodation provided under the Supported Accommodation Assistance Program, people staying with other households because they have no accommodation of their own and people staying in boarding houses on a short-term basis, defined as 12 weeks or less); and tertiary homelessness (people living in boarding houses on a medium to long-term basis, defined as 13 weeks or longer – that is, they are staying in accommodation which is below the minimum community standard of a small self-contained flat). Table 7 on homeless people by state and territory in *Counting the homeless 2006: Australia* on p. x refers to a national total of 104,676 who were counted as homeless in the 2006 census, but p. vii states that for policy and planning purposes, a national figure of 105,000 can be quoted.
- ³² Chris Chamberlain and David MacKenzie, Table 1, persons in different sectors of the homeless population on census night, p. viii.
- ³³ Chris Chamberlain and David MacKenzie, Table 2, homeless single person, couple and family households.
- ³⁴ Department of Families, Housing, Community Services and Indigenous Affairs, *The road home*, 2008, p. 4, Table 1, unpublished table from Department of Families, Housing, Community Services and Indigenous Affairs using ABS census 2006 data.
- ³⁵ Chris Chamberlain and David MacKenzie, Table 8.4, number of homeless people by state and territory, p. 46.
- ³⁶ Chris Chamberlain and David MacKenzie, Table 8.3, rate of homelessness per 10,000 of the population, p. 46.
- ³⁷ In 2006, 19.7% of SAAP clients across Australia were identified as Aboriginal and Torres Strait Islander peoples (Chris Chamberlain and David MacKenzie, p. 29). The experiences of homelessness by Aboriginal and Torres Strait Islander peoples can differ from those of other Australians, due to the distinct causes and contexts for their experiences. Keys Young have formulated five types of homelessness experienced by Aboriginal and Torres Strait Islander peoples which cover: spiritual homelessness (relating to separation from traditional land or family); overcrowding; relocation and transient homelessness (due to mobile lifestyles as well as the necessity of a larger proportion of

Aboriginal and Torres Strait Islander peoples having to travel to obtain services); escaping unsafe homes; and lack of access to stable housing. Compared to homelessness experienced by others, homelessness experienced by Aboriginal and Torres Strait Islander peoples is a broader issue because it encompasses the experiences of individuals, families and communities, as well as the intergenerational impact of colonisation and dispossession (Keys Young, 'Homelessness in the Aboriginal and Torres Strait Islander context and its possible implications for the Supported Accommodation Assistance Program', Department of Family and Community Services, 1999, pp. iv, 129).

³⁸ Australian Institute of Health and Welfare, Supported Accommodation Assistance Program national data collection annual reports. The 2008–09 annual report was entitled 'Government-funded specialist homelessness services'. On 1 January 2009, SAAP was discontinued as a separate program and specialist homelessness services were included under the National Affordable Housing Agreement. This resulted in some changes in the way the jurisdictions administer the agencies; for example, the number of funded agencies and the number of agencies that were required to participate in the data collection decreased from those reported in 2008–09. A client might have more than one contact with a SAAP agency in a year, although most do not.
